

NOISE LIMIT WARNING SIGN

Featuring for the

FIRST TIME

in the traffic management sector!

The noise limit warning sign detects oncoming vehicles and, based on the noise they are making (e.g. noise levels above 84dB), displays a warning message for drivers to ease up on the accelerator while passing through a village or neighbourhood whose residents prefer a calmer and quieter environment.

The noise limit warning signs are already successfully installed in Austrian villages where there were many complaints from local residents about noise from motorcycle drivers, from spring until autumn.

Beside displaying speed and noise level to the oncoming drivers, Sphere traffic signs can also be connected to the Internet, which allows the end-user to easily download in real time various traffic statistics, customise the appearance of the LED warning messages and set up various information for the traffic sign to display, such as pollution level and temperature.

EYE-CATCHING DESIGN

With its rounded edges, protective Plexiglas, the optimum ratio of geometrical shapes and batteries contained in one single, compact unit, Sphere traffic signs fit perfectly in any environment.
